MARKET CONTEXT

Market started gapping up from the EMA from Pre-Market since Bar 61-Pre — a strong indication of a continuation higher as price closes above the EMA. Market moves sideways since Bar 61-Pre which also serves as the Motherbar. Using a Fib Retracement to do a BLSH would have worked, gives 29 ticks one way.

T01

LONG

Buy Stop

ENTRY	STOP	TARGET RR	RESULT
1t above Bar 61 Pre	Below Bar 68 Low	1 : 2	+101 ticks ✓

Bar 1 was a Breakout Bar breaking the range from Bar 61 (Pre) to Bar 76 (Pre). Placing a Buy STOP 1 tick above Bar 61 expecting range breakout gives high probability of win. Entry Buy STOP 1 tick above Bar 61 (Pre) and STOP below Bar 68 lowest point of the range. Using the Range from Pre-Market as MM up taking high of Bar 64 (Pre) as exhaustion point. Exit at Bar 7 for a 1:2 RR gives 101 ticks.

T02

SHORT

Sell Stop

ENTRY	STOP	TARGET RR	RESULT
1t below Bar 10	Bar 10/11 High	1 : 2.5	+71 ticks ✓

Bar 5 to Bar 7 is Leg 1 and Bar 9 to Bar 11 is Leg 2. Bar 8/9 is Low 1 and Bar 10/11 is Low 2. After spike move up, market tends to reverse after 2 legs and L2 is a good Entry for Short. Entry Sell STOP 1 tick below Bar 10 after Bar 12 close at its low. Using Bar 10/11 as MM down expecting 1:2.5 RR move. Markets move 2 legs down as expected — Bar 12 to Bar 14 as Leg 1 and Bar 17 to Bar 19 as Leg 2. Exit at Bar 14 for 1:2.5 RR gives 71 ticks.

T03

LONG

Buy Stop

Managed

ENTRY	STOP	TARGET RR	RESULT
1t above Bar 21	1t below Bar 20	1:1 (→ 1:2.5)	+27 ticks ✓

Bar 15/16 is a High 1 and Bar 20/21 is High 2. After 2 legs down, high probability of markets reversing direction, while price closes above the EMA at Bar 21 — at H2 signal. Entry Buy STOP 1 tick above Bar 21 and STOP 1 tick below Bar 20. Using Bar 20/21 as MM up expecting another 2 legs up. The target was 1:2.5 however Bar 29

reached price exhaustion signal as TD9. Price did not hit the STOP during the Bar 29 pullback and price reverses back up — moved exit to 1:1 RR filled at Bar 30. The trade was invalidated for the expected target, and managed to secure profit on the pullback.

PROCESS NOTE

Sticking to the process is very important although in reality after 1:1 target is reached, STOP should be moved while aiming for 1:2.5 RR target. In this case, the stop was moved as market was performing as expected until Bar 29 noise move.

SESSION NOTES

After the noise, it was not worthed to continue trading as market becomes very difficult as surprising headlines continue to enter the market and it's Friday. It was best to walk away after securing profits — and on top of that CVD starts to move lower after the noise.
