

EOD REVIEW • MES • 5-Minute Bars

Mar 13, 2026

PRE-MARKET CONTEXT

Price Action was trending up since Sunday Open. This is strong indication of a reversal to the upside from Friday's low..

↑ **T01****LONG** ▾

Bars 1-3

CONTEXT

highest point of TR likely push price higher. Bar E196 and Bar E197 are doji bars, Bar E198 and Bar 1 is a High 1. A break above bar E190 is a good entry point for a Long.

ENTRY

BUY STOP 1 tick above Bar E190
STOP below

EXIT

Exit at Bar 4 using the range MM up

REASON

Waiting for PA to break the top of the range is key to avoid a possible Bull Trap.

STOP placement during the trade is very important to manage risk. Know your risk before entering a trade. Always trade small

48

↓ **T02****SHORT** ▾

Bars 1-3

CONTEXT

count. Bars 6 - Bar 12 overlaps and PA tested the top of Bar 8 but never close above it. This is a strong indication PA may move lower. Bar 10/11 is a Low 2. With all the confluence, this is a good short play

ENTRY

SHORT STOP 1 tick below IOI pattern Bar5.
STOP above Bar 9

EXIT

Exit at Bar 17 for 1:1 R using IOI range for Measured move down

REASON

IOI is a high probability setup moving either way so context is very important. This is an IOI play

The 9 EMA is very reliable for a short term trade as a "guide"

60

↓ **T03****SHORT** ▾

Bars 1-3

CONTEXT

We have 2 pushes up from the open B1-B9 and B17-B26. And within B17-B26, we also have 2 legs up, Shows high probability of reversal price action to the down side. Bar 27-28 is a Low 2

ENTRY

Entry at 1 tick below Bar 27
STOP at 1 tick above Bar 26 being the last HL

EXIT

Exit at Bar 31 for a 1:2.5R

REASON

This was taken out of gut feeling and strong conviction of the signals fired by TradingView for a confirmed 2nd Leg

I should have waited for confirmation but it was a 5 point risk so shorted (front-run) the move.
